

AQA A Level Psychology – Year 2

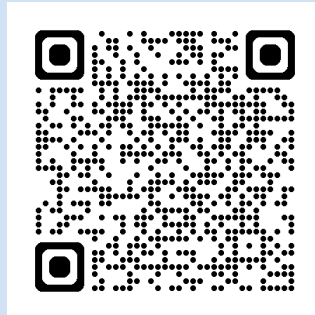

Psychology has been defined as “the science of mind and behaviour”. Essentially, psychology is all about people. We are all amateur psychologists, every time we try and work out why someone acted the way they did or try to predict how someone might behave or react.

What will I learn in Year 2?

Students will continue to develop their skills and knowledge they learnt in year 1, with a heavier focus on evaluation of psychological research. Students will develop their understanding of biology, in particular the brain, and how it may impact behaviour. They will then go on to look at psychological factors being attachment and romantic relationships; how psychological research can help our understanding of schizophrenia and aggressive behaviours.
