

Photography

Welcome to Photography!

A Level Photography is part of the Art and Design curriculum. Photography is a practical course, incorporating a range of creative techniques and processes. You will work on several mini projects in the first year, working with various cameras and studio equipment to explore the genres of photography. You will have the opportunity to explore your own ideas in a creative way and experiment with various techniques, including digital cameras, more traditional film and image manipulation software, such as Adobe Photoshop.

What are we studying?

Throughout the course, you will learn all about how to take and edit photos, as well as the different contexts of photography and how it helps us see The World.

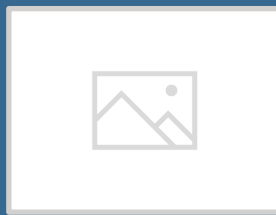

Using DSLR cameras, exposure and composition

Adobe Photoshop and image manipulation techniques

Studio lighting in our own photo studio

More on A Level Photography

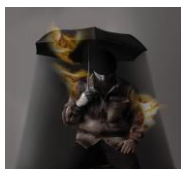

A Level Photography is made up of two course work components

Component 1: Personal Investigation (includes essay)

Component 2: Externally Set Assignment (includes 15 hour controlled assessment)

Student Success!!
